DETAILED ACTION

Claims 1-23 are pending.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 20-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shryne et al (US 4,024,165).

Shryne et al teaches an epoxidation process using hydrogen peroxide as an oxidant and trialkylamine as a catalyst (or a reagent); note the Abstract and lines 25-37 column 2 of the patent. The prior art olefins contain a double bond (or an ethylenic unsaturation); note lines 52 to 68 of the same. The current process as claimed in claim 1 is in generic form wherein the current alkene would embrace the prior art olefins; the current oxidizing agent would imply the prior art hydrogen peroxide and the current amine of formula (I) would embrace or be analogous to the prior art trialkylamine. Thus, the claimed process would be deemed obvious over the teachings of Shryne et al.

Claims 2 to 19 and 23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 2 to 19 and 23 contain reaction parameter(the amine) which is not taught and/or fairly suggested by the prior art.
